Class Summary

[AdminProductActivity](#)

Class for admin that shows the product list

[AdministrationActivity](#)

A simple class representing the activity of the administration.xml layout, which only admins can enter.

[BillListActivity](#)

Class represents a list of bills

[HistoryActivity](#)

This activity shows the history of the products the user has bought

[LoginActivity](#)

Activity of the login screen

[MainmenueActivity](#)

Activity of the main menu

[MyAccountActivity](#)

Class which shows information about the user

[ProductlistActivity](#)

Activity for a list of products

[RegisterActivity](#)

Activity for registration

[UserListActivity](#)

This Activity represents User list

activities

Class AdminProductActivity

```
java.lang.Object
|
|--android.app.Activity
|   |
|   |--android.support.v4.app.FragmentActivity
|       |
|       |--android.support.v7.app.ActionBarActivity
|           |
|           |--activities.AdminProductActivity
```

All Implemented Interfaces:

android.support.v4.app.ActionBarDrawerToggle.DelegateProvider,
android.support.v4.app.TaskStackBuilder.SupportParentable,
android.support.v7.app.ActionBar.Callback,
android.support.v7.app.ActionBarDrawerToggle.TmpDelegateProvider, [ResponseListener](#)

< [Fields](#) > < [Constructors](#) > < [Methods](#) >

```
public class AdminProductActivity
extends android.support.v7.app.ActionBarActivity
implements ResponseListener
```

Class for admin that shows the product list

Author:

Simon

Fields

mContext

```
public Context mContext
```

mList

```
public static ListView mList
```

Constructors

AdminProductActivity

```
public AdminProductActivity()
```

Methods

createAddDialog

```
public Dialog createAddDialog()
```

Dialog for adding a new product

Returns:

dialog Returns a dialog to write in the product data.

createChangeDialog

```
public Dialog createChangeDialog(Product chosenProduct)
```

Creates dialog to change the product.

Parameters:

chosenProduct - the clicked product

Returns:

dialog Returns a dialog to write in the new product data

getContext

```
public Context getContext()
```

getList

```
public static ListView getList()
```

handleIntent

```
public void handleIntent(Intent intent)
```

Method to handle the intent of the search dialog

Parameters:

intent - The input the user writes in the search dialog

onCreate

```
public void onCreate(Bundle savedInstanceState)
```

Overrides:

onCreate in class android.support.v7.app.ActionBarActivity

onCreateDialog

```
public Dialog onCreateDialog(Product chosenProduct)
```

Creates dialog when a list item is clicked

Parameters:

chosenProduct - The clicked product

Returns:

dialog Method returns a dialog

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

onNewIntent

```
public void onNewIntent(Intent intent)
```

Overrides:

onNewIntent in class android.support.v4.app.FragmentActivity

onOptionsItemSelected

```
public boolean onOptionsItemSelected(MenuItem item)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             OnClickListener dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

activities

Class AdministrationActivity

```
java.lang.Object  
|  
+--android.app.Activity  
|   |  
|   +--android.support.v4.app.FragmentActivity  
|       |  
|       +--android.support.v7.app.ActionBarActivity  
|           |  
|           +--activities.AdministrationActivity
```

All Implemented Interfaces:

android.support.v4.app.ActionBarDrawerToggle.DelegateProvider,
android.support.v4.app.TaskStackBuilder.SupportParentable,
android.support.v7.app.ActionBar.Callback,
android.support.v7.app.ActionBarDrawerToggle.TmpDelegateProvider

< [Constructors](#) > < [Methods](#) >

```
public class AdministrationActivity  
extends android.support.v7.app.ActionBarActivity
```

A simple class representing the activity of the administration.xml layout, which only admins can enter.

Author:

Simon

Constructors

AdministrationActivity

```
public AdministrationActivity()
```

Methods

onCreate

```
protected void onCreate(Bundle savedInstanceState)
```

Overrides:

```
onCreate in class android.support.v7.app.ActionBarActivity
```

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

```
create options menu
```

onOptionsItemSelected

```
public boolean onOptionsItemSelected(MenuItem item)
```

openBilllist

```
public void openBilllist(View view)
```

Method to open the bill

Parameters:

```
view - onClick handles button click
```

openProductlist

```
public void openProductlist(View view)
```

Method to open the product list

Parameters:

```
view - onClick handles button click
```

openScanner

```
public void openScanner(View view)
```

openUserlist

```
public void openUserlist(View view)
```

Method to open the userlist

Parameters:

view - onClick handles button click

activities

Class BillListActivity

```
java.lang.Object
|
+--android.app.Activity
|
|   +--android.support.v4.app.FragmentActivity
|   |
|   |   +--android.support.v7.app.ActionBarActivity
|   |   |
|   |   |   +--activities.BillListActivity
```

All Implemented Interfaces:

android.support.v4.app.ActionBarDrawerToggle.DelegateProvider,
android.support.v4.app.TaskStackBuilder.SupportParentable,
android.support.v7.app.ActionBar.Callback,
android.support.v7.app.ActionBarDrawerToggle.TmpDelegateProvider, [ResponseListener](#)

< [Fields](#) > < [Constructors](#) > < [Methods](#) >

```
public class BillListActivity
extends android.support.v7.app.ActionBarActivity
implements ResponseListener
```

Class represents a list of bills

Author:

Simon

Fields

mContext

```
public Context mContext
```

Constructors

BillListActivity

```
public BillListActivity()
```

Methods

getContext

```
public Context getContext()
```

onCreate

```
protected void onCreate(Bundle savedInstanceState)
```

Overrides:

onCreate in class android.support.v7.app.ActionBarActivity

onCreateDialog

```
public Dialog onCreateDialog(Bill clickedBill)
```

This method opens a dialog when a list item was clicked

Parameters:

clickedBill - The clicked bill item

Returns:

dialog Dialog to confirm when a user has payed.

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

onOptionsItemSelected

```
public boolean onOptionsItemSelected(MenuItem item)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             OnClickListener dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

activities

Class HistoryActivity

```
java.lang.Object  
|  
+--android.app.Activity  
|  
+--android.support.v4.app.FragmentActivity  
|  
+--android.support.v7.app.ActionBarActivity  
|  
+--activities.HistoryActivity
```

All Implemented Interfaces:

android.support.v4.app.ActionBarDrawerToggle.DelegateProvider,
android.support.v4.app.TaskStackBuilder.SupportParentable,
android.support.v7.app.ActionBar.Callback,
android.support.v7.app.ActionBarDrawerToggle.TmpDelegateProvider, [ResponseListener](#)

< [Fields](#) > < [Constructors](#) > < [Methods](#) >

```
public class HistoryActivity  
extends android.support.v7.app.ActionBarActivity  
implements ResponseListener
```

This activity shows the history of the products the user has bought

Author:

Simon

Fields

mContext

```
public Context mContext
```

Constructors

HistoryActivity

```
public HistoryActivity()
```

Methods

checkHistoryMessage

```
public void checkHistoryMessage(java.lang.String message)
```

Method to check the message

Parameters:

message - The message from the server

getContext

```
public Context getContext()
```

getMoreHistories

```
public void getMoreHistories(View view)
```

Method to get 10 more objects of the history

Parameters:

view - Is needed for handling a button click

onCreate

```
protected void onCreate(Bundle savedInstanceState)
```

Overrides:

onCreate in class android.support.v7.app.ActionBarActivity

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

onOptionsItemSelected

```
public boolean onOptionsItemSelected(MenuItem item)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             OnClickListener dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

activities

Class LoginActivity

```
java.lang.Object  
|  
+--android.app.Activity  
|   |  
|   +--android.support.v4.app.FragmentActivity  
|       |  
|       +--android.support.v7.app.ActionBarActivity  
|           |  
|           +--activities.LoginActivity
```

All Implemented Interfaces:

android.support.v4.app.ActionBarDrawerToggle.DelegateProvider,
android.support.v4.app.TaskStackBuilder.SupportParentable,
android.support.v7.app.ActionBar.Callback,
android.support.v7.app.ActionBarDrawerToggle.TmpDelegateProvider, [ResponseListener](#)

< [Fields](#) > < [Constructors](#) > < [Methods](#) >

```
public class LoginActivity  
extends android.support.v7.app.ActionBarActivity  
implements ResponseListener
```

Activity of the login screen

Author:

Simon

Fields

mContext

```
public Context mContext
```

Constructors

LoginActivity

```
public LoginActivity()
```

Methods

getContext

```
public Context getContext()
```

getHash

```
public static java.lang.String getHash(java.lang.String txt)
```

Method to get the MD5 of a string.

Parameters:

txt - The input (password)

Returns:

txt The MD5-hashed string

goToRegister

```
public void goToRegister(View view)
```

Method to enter the register screen when "Go to register" TextView is clicked.

Parameters:

view - Handles button clicks.

isNumeric

```
public static boolean isNumeric(java.lang.String str)
```

Checks if the string is a number

Parameters:

str - Input string to check.

Returns:

boolean Returns whether String is/isnt a number.

login

```
public void login(View view)
```

Method to login

Parameters:

view - Needed for clicking the button

logout

```
public void logout()
```

Method to logout. This method is called in startTimer(). A thread is started, handleLogoutMessage(String message) will handle the response of the server.

onCreate

```
protected void onCreate(Bundle savedInstanceState)
```

Overrides:

onCreate in class android.support.v7.app.ActionBarActivity

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             OnClickListener dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

startTimer

```
public void startTimer()
```

Method to start timer for automatically logout

activities

Class MainmenuActivity

```
java.lang.Object  
|  
+--android.app.Activity  
|   |  
|   +--android.support.v4.app.FragmentActivity  
|       |  
|       +--android.support.v7.app.ActionBarActivity  
|           |  
|           +--activities.MainmenuActivity
```

All Implemented Interfaces:

android.support.v4.app.ActionBarDrawerToggle.DelegateProvider,
android.support.v4.app.TaskStackBuilder.SupportParentable,
android.support.v7.app.ActionBar.Callback,
android.support.v7.app.ActionBarDrawerToggle.TmpDelegateProvider, [ResponseListener](#)

< [Fields](#) > < [Constructors](#) > < [Methods](#) >

```
public class MainmenuActivity  
extends android.support.v7.app.ActionBarActivity  
implements ResponseListener
```

Activity of the main menu

Author:

Simon

Fields

mContext

```
final Context mContext
```

Constructors

MainmenueActivity

```
public MainmenueActivity()
```

Methods

closeApp

```
public void closeApp(View view)
```

Method to close the app

Parameters:

view - Handles button clicks

getContext

```
public Context getContext()
```

logout

```
public void logout()
```

Method to logout

onBackPressed

```
public void onBackPressed()
```

Overrides:

onBackPressed in class android.support.v7.app.ActionBarActivity

onCreate

```
protected void onCreate(Bundle savedInstanceState)
```

Overrides:

```
onCreate in class android.support.v7.app.ActionBarActivity
```

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

onOptionsItemSelected

```
public boolean onOptionsItemSelected(MenuItem item)
```

openMyAccount

```
public void openMyAccount(View view)
```

Method to open MyAccount

Parameters:

view - Button click

openProductList

```
public void openProductList(View view)
```

Method to open ProductList

Parameters:

view - Button click

openScanner

```
public void openScanner(View view)
```

method to open the BarcodeScanner

Parameters:

view - Used for click handling

openUserAdministration

```
public void openUserAdministration(View view)
```

Method to open user administration for admin

Parameters:

view - Button click

responseReceived

```
public void responseReceived(java.lang.String message,  
                             android.content.DialogInterface.OnClickListener  
dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

activities

Class MyAccountActivity

```
java.lang.Object  
|  
+--android.app.Activity  
|   |  
|   +--android.support.v4.app.FragmentActivity  
|       |  
|       +--android.support.v7.app.ActionBarActivity  
|           |  
|           +--activities.MyAccountActivity
```

All Implemented Interfaces:

android.support.v4.app.ActionBarDrawerToggle.DelegateProvider,
android.support.v4.app.TaskStackBuilder.SupportParentable,
android.support.v7.app.ActionBar.Callback,
android.support.v7.app.ActionBarDrawerToggle.TmpDelegateProvider, [ResponseListener](#)

< [Fields](#) > < [Constructors](#) > < [Methods](#) >

```
public class MyAccountActivity  
extends android.support.v7.app.ActionBarActivity  
implements ResponseListener
```

Class which shows information about the user

Author:

Simon

Fields

mContext

```
public Context mContext
```

mResponseListener

```
final ResponseListener mResponseListener
```

Constructors

MyAccountActivity

```
public MyAccountActivity()
```

Methods

deleteUser

```
public void deleteUser()
```

Method to delete the own account

deleteUserDialog

```
public void deleteUserDialog()
```

Method opens a dialog to delete the account

getContext

```
public Context getContext()
```

getUserData

```
public User getUserData(java.lang.String message)
```

Method to get a user object

Returns:

u The user data from the user, who is logged in.

onCreate

```
protected void onCreate(Bundle savedInstanceState)
```

Overrides:

onCreate in class android.support.v7.app.ActionBarActivity

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

onOptionsItemSelected

```
public boolean onOptionsItemSelected(MenuItem item)
```

openHistory

```
public void openHistory(View view)
```

Method to open the history

Parameters:

view - Button click

optionsDialog

```
public void optionsDialog(View view)
```

Method to create dialog when options is clicked

Parameters:

view - Handles button click

responseReceived

```
public void responseReceived(java.lang.String message,  
                             OnClickListener dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

activities

Class ProductlistActivity

```
java.lang.Object  
|  
+--android.app.Activity  
|  
+--android.support.v4.app.FragmentActivity  
|  
+--android.support.v7.app.ActionBarActivity  
|  
+--activities.ProductlistActivity
```

All Implemented Interfaces:

android.support.v4.app.ActionBarDrawerToggle.DelegateProvider,
android.support.v4.app.TaskStackBuilder.SupportParentable,
android.support.v7.app.ActionBar.Callback,
android.support.v7.app.ActionBarDrawerToggle.TmpDelegateProvider, [ResponseListener](#)

< [Constructors](#) > < [Methods](#) >

```
public class ProductlistActivity  
extends android.support.v7.app.ActionBarActivity  
implements ResponseListener
```

Activity for a list of products

Author:

Simon

Constructors

ProductlistActivity

```
public ProductlistActivity()
```

Methods

bookProduct

```
public void bookProduct(java.lang.String barcode)
```

Method for booking a product. Opens a thread.

Parameters:

barcode - The barcode of the selected product

bookProductDialog

```
public void bookProductDialog(Product selectedProduct)
```

Dialog to confirm the booking of a product

Parameters:

selectedProduct - The clicked product

getContext

```
public Context getContext()
```

getList

```
public static ListView getList()
```

Method to get the listview of the activity

Returns:

mListView The ListView object

handleIntent

```
public void handleIntent(Intent intent)
```

Method that reacts to the input of the search dialog

Parameters:

intent - The input from the search dialog

onCreate

```
public void onCreate(Bundle savedInstanceState)
```

Overrides:

onCreate in class android.support.v7.app.ActionBarActivity

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

onNewIntent

```
public void onNewIntent(Intent intent)
```

Overrides:

onNewIntent in class android.support.v4.app.FragmentActivity

onOptionsItemSelected

```
public boolean onOptionsItemSelected(MenuItem item)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             OnClickListener dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

activities

Class RegisterActivity

```
java.lang.Object  
|  
+--android.app.Activity  
|  
+--android.support.v4.app.FragmentActivity  
|  
+--android.support.v7.app.ActionBarActivity  
|  
+--activities.RegisterActivity
```

All Implemented Interfaces:

android.support.v4.app.ActionBarDrawerToggle.DelegateProvider,
android.support.v4.app.TaskStackBuilder.SupportParentable,
android.support.v7.app.ActionBar.Callback,
android.support.v7.app.ActionBarDrawerToggle.TmpDelegateProvider, [ResponseListener](#)

< [Fields](#) > < [Constructors](#) > < [Methods](#) >

```
public class RegisterActivity  
extends android.support.v7.app.ActionBarActivity  
implements ResponseListener
```

Activity for registration

Author:

Simon

Fields

mContext

```
public Context mContext
```

Constructors

RegisterActivity

```
public RegisterActivity()
```

Methods

getContext

```
public Context getContext()
```

goBack

```
public void goBack(View view)
```

login

```
public void login()
```

Method to login right after the registration.

onCreate

```
protected void onCreate(Bundle savedInstanceState)
```

Overrides:

`onCreate` in class `android.support.v7.app.ActionBarActivity`

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

onOptionsItemSelected

```
public boolean onOptionsItemSelected(MenuItem item)
```

register

```
public void register(View view)
```

Method to register

Parameters:

view - Handles a button click

responseReceived

```
public void responseReceived(java.lang.String message,  
                             OnClickListener dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

activities

Class UserListActivity

```
java.lang.Object  
|  
+--android.app.Activity  
|   |  
|   +--android.support.v4.app.FragmentActivity  
|       |  
|       +--android.support.v7.app.ActionBarActivity  
|           |  
|           +--activities.UserListActivity
```

All Implemented Interfaces:

android.support.v4.app.ActionBarDrawerToggle.DelegateProvider,
android.support.v4.app.TaskStackBuilder.SupportParentable,
android.support.v7.app.ActionBar.Callback,
android.support.v7.app.ActionBarDrawerToggle.TmpDelegateProvider, [ResponseListener](#)

< [Fields](#) > < [Constructors](#) > < [Methods](#) >

```
public class UserListActivity  
extends android.support.v7.app.ActionBarActivity  
implements ResponseListener
```

This Activity represents User list

Author:

Fields

mContext

```
public Context mContext
```

Constructors

UserListActivity

```
public UserListActivity()
```

Methods

deleteUserDialog

```
public void deleteUserDialog(User clickedUser)
```

This dialog opens if you want to delete a user from the list

Parameters:

clickedUser - The user that should be deleted

getContext

```
public Context getContext()
```

getList

```
public static ListView getList()
```

Method to get the list

Returns:

ListView Returns the ListView object.

handleIntent

```
public void handleIntent(Intent intent)
```

Method to handle the input of the SearchDialog

Parameters:

intent - The input of the dialog.

nameSearchDialog

```
public Dialog nameSearchDialog()
```

Dialog for the name search

Returns:

dialog Returns a Dialog

onCreate

```
public void onCreate(Bundle savedInstanceState)
```

Overrides:

onCreate in class android.support.v7.app.ActionBarActivity

onCreateDialog

```
public Dialog onCreateDialog(User clickedUser)
```

Method opens a dialog.

Parameters:

clickedUser - The clicked item

Returns:

Dialog A dialog for choosing between send a mail and delete a user.

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

onNewIntent

```
public void onNewIntent(Intent intent)
```

Overrides:

onNewIntent in class android.support.v4.app.FragmentActivity

onOptionsItemSelected

```
public boolean onOptionsItemSelected(MenuItem item)
```

onSearchDialog

```
public Dialog onSearchDialog()
```

Dialog to choose mail- or name search

Returns:

dialog Returns a dialog.

openDeleteUserThread

```
public void openDeleteUserThread(User clickedUser)
```

Method starts a new thread to delete a chosen user.

Parameters:

clickedUser - The user who was clicked.

responseReceived

```
public void responseReceived(java.lang.String message,  
                             OnClickListener dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

searchMail

```
public AlertDialog searchMail()
```

Method to search a mail address.

Returns:

AlertDialog A dialog to write in the mail address

Package adapter

Class Summary

[BillAdapter](#)

This class represents an adapter for the BillList

[BillAdapter.BillViewHolder](#)

Class to set the TextViews, which will be put in one line of the list.

[HistoryAdapter](#)

Adapter that converts a history object in a line of a list

[HistoryAdapter.HistoryViewHolder](#)

Class to set three TextViews which will be represented in one line of the list

[ProductAdapter](#)

Adapter for product list.

[ProductAdapter.ViewHolder](#)

Holds three TextViews, which will be put in one line of the list.

[UserAdapter](#)

Adapter for a user list.

[UserAdapter.UserViewHolder](#)

Class to set the TextViews, which will be put in one line of the list.

adapter

Class BillAdapter

```
java.lang.Object
|
+--BaseAdapter
|
+--adapter.BillAdapter
```

< [Constructors](#) > < [Methods](#) >

```
public class BillAdapter
extends BaseAdapter
```

This class represents an adapter for the BillList

Author:

Simon

Constructors

BillAdapter

```
public BillAdapter(Context coherence,  
                  java.util.ArrayList resultList)
```

Adapter for bills. Sets a line of the list with three TextViews

Parameters:

coherence - The context

resultList - The list containing bill objects

Methods

getCount

```
public int getCount()
```

getItem

```
public java.lang.Object getItem(int position)
```

getItemId

```
public long getItemId(int position)
```

getView

```
public View getView(int position,  
                   View newView,  
                   ViewGroup parent)
```

adapter

Class BillAdapter.BillViewHolder

```
java.lang.Object
|
+--adapter.BillAdapter.BillViewHolder
```

< [Fields](#) > < [Constructors](#) >

static class **BillAdapter.BillViewHolder**
extends java.lang.Object

Class to set the TextViews, which will be put in one line of the list.

Author:

Simon

BillAdapter.BillViewHolder

```
BillAdapter.BillViewHolder()
```

adapter

Class HistoryAdapter

```
java.lang.Object
|
+--BaseAdapter
|
+--adapter.HistoryAdapter
```

< [Constructors](#) > < [Methods](#) >

```
public class HistoryAdapter
extends BaseAdapter
```

Adapter that converts a history object in a line of a list

Author:

Simon

Constructors

HistoryAdapter

```
public HistoryAdapter(Context coherence,
                      java.util.ArrayList resultList)
```

Methods

getCount

```
public int getCount()
```

getItem

```
public java.lang.Object getItem(int position)
```

getItemId

```
public long getItemId(int position)
```

getView

```
public View getView(int position,  
                    View convertView,  
                    ViewGroup parent)
```

adapter

Class HistoryAdapter.HistoryViewHolder

```
java.lang.Object  
|  
+--adapter.HistoryAdapter.HistoryViewHolder
```

< [Fields](#) > < [Constructors](#) >

```
static class HistoryAdapter.HistoryViewHolder  
extends java.lang.Object
```

Class to set three TextViews which will be represented in one line of the list

Author:

Schonhart

Fields

date

TextView **date**

payed

TextView **payed**

productName

TextView **productName**

Constructors

HistoryAdapter.HistoryViewHolder

```
HistoryAdapter.HistoryViewHolder()
```

adapter

Class ProductAdapter

```
java.lang.Object
|
+--BaseAdapter
|
+--adapter.ProductAdapter
```

< [Constructors](#) > < [Methods](#) >

```
public class ProductAdapter
extends BaseAdapter
```

Adapter for product list. Converts the information of a product object in a line of the list

Author:

Simon

Constructors

ProductAdapter

```
public ProductAdapter(Context coherence,
                      java.util.ArrayList resultList)
```

Converts the information of a product object in a line of the list

Parameters:

coherence - The context

resultList - The given product ArrayList

Methods

getCount

```
public int getCount()
```

getItem

```
public java.lang.Object getItem(int position)
```

getItemId

```
public long getItemId(int position)
```

getView

```
public View getView(int position,  
                    View newView,  
                    ViewGroup parent)
```

adapter

Class ProductAdapter.ViewHolder

```
java.lang.Object  
|  
+--adapter.ProductAdapter.ViewHolder
```

< [Fields](#) > < [Constructors](#) >

```
static class ProductAdapter.ViewHolder  
extends java.lang.Object
```

Holds three TextViews, which will be put in one line of the list.

Author:

Simon

Fields

barcode

```
TextView barcode
```

price

```
TextView price
```

productName

TextView productName

Constructors

ProductAdapter.ViewHolder

```
ProductAdapter.ViewHolder()
```

adapter

Class UserAdapter

```
java.lang.Object
|
+--BaseAdapter
|
+--adapter.UserAdapter
```

< [Constructors](#) > < [Methods](#) >

```
public class UserAdapter
extends BaseAdapter
```

Adapter for a user list. Represents the information of a productobject in a line of the list

Author:

Simon

Constructors

UserAdapter

```
public UserAdapter(Context coherence,
                    java.util.ArrayList resultList)
```

Methods

getCount

```
public int getCount()
```

getItem

```
public java.lang.Object getItem(int position)
```

getItemId

```
public long getItemId(int position)
```

getView

```
public View getView(int position,  
                    View newView,  
                    ViewGroup parent)
```

adapter

Class UserAdapter.UserViewHolder

```
java.lang.Object  
|  
+--adapter.UserAdapter.UserViewHolder
```

< [Fields](#) > < [Constructors](#) >

```
static class UserAdapter.UserViewHolder  
extends java.lang.Object
```

Class to set the TextViews, which will be put in one line of the list.

Author:

Schonhart

Fields

UserName

TextView **UserName**

mail

TextView **mail**

payamount

TextView **payamount**

Constructors

UserAdapter.UserViewHolder

```
UserAdapter.UserViewHolder()
```

Package camera

Class Summary

[AdminCameraActivity](#)

[CameraPreview](#)

A basic Camera preview class

[CameraTestActivity](#)

camera

Class AdminCameraActivity

```
java.lang.Object
|
+--camera.AdminCameraActivity
```

< [Fields](#) > < [Methods](#) >

```
public class AdminCameraActivity
extends java.lang.Object
```

Fields

autoFocusCB

```
AutoFocusCallback autoFocusCB
```

mContext

```
public Context mContext
```

mResponseListener

```
final ResponseListener mResponseListener
```

previewCb

```
PreviewCallback previewCb
```

scanButton

Button **scanButton**

scanText

TextView **scanText**

scanner

net.sourceforge.zbar.ImageScanner **scanner**

Methods

createAddDialog

```
public Dialog createAddDialog(java.lang.String barcode)
```

getCameraInstance

```
public static Camera getCameraInstance()
```

A safe way to get an instance of the Camera object.

getContext

```
public Context getContext()
```

onCreate

```
public void onCreate(Bundle savedInstanceState)
```

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

onOptionsItemSelected

```
public boolean onOptionsItemSelected(MenuItem item)
```

onPause

```
protected void onPause()
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             android.content.DialogInterface.OnClickListener  
dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

camera

Class CameraPreview

```
java.lang.Object  
|  
+--SurfaceView  
|  
+--camera.CameraPreview
```

< [Constructors](#) > < [Methods](#) >

```
public class CameraPreview  
extends SurfaceView
```

A basic Camera preview class

Constructors

CameraPreview

```
public CameraPreview(Context context,
                    Camera camera,
                    PreviewCallback previewCb,
                    AutoFocusCallback autoFocusCb)
```

Methods

surfaceChanged

```
public void surfaceChanged(SurfaceHolder holder,
                          int format,
                          int width,
                          int height)
```

surfaceCreated

```
public void surfaceCreated(SurfaceHolder holder)
```

surfaceDestroyed

```
public void surfaceDestroyed(SurfaceHolder holder)
```

camera

Class CameraTestActivity

```
java.lang.Object
|
+--camera.CameraTestActivity
```

< [Fields](#) > < [Methods](#) >

```
public class CameraTestActivity
extends java.lang.Object
```

Fields

autoFocusCB

AutoFocusCallback **autoFocusCB**

mContext

public Context **mContext**

previewCb

PreviewCallback **previewCb**

scanButton

Button **scanButton**

scanText

TextView **scanText**

scanner

net.sourceforge.zbar.ImageScanner **scanner**

Methods

bookProduct

```
public void bookProduct(java.lang.String barcode)
```

method to book a product.

Parameters:

barcode -

bookProductDialog

```
public void bookProductDialog(java.lang.String barcode)
```

method opens a dialog to confirm booking. Searches the product that was scanned

Parameters:

barcode - The barcode of the scanned product

getCameraInstance

```
public static Camera getCameraInstance()
```

A safe way to get an instance of the Camera object.

getContext

```
public Context getContext()
```

onCreate

```
public void onCreate(Bundle savedInstanceState)
```

onCreateOptionsMenu

```
public boolean onCreateOptionsMenu(Menu menu)
```

onOptionsItemSelected

```
public boolean onOptionsItemSelected(MenuItem item)
```

onPause

```
protected void onPause()
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             android.content.DialogInterface.OnClickListener  
dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

Package client

Class Summary

[Client](#)

Class Client holds the sessionid.

client

Class Client

```
java.lang.Object
|
+--client.Client
```

< [Fields](#) > < [Constructors](#) >

```
public class Client
extends java.lang.Object
```

Class Client holds the sessionid.

Author:

Schonhart

Fields

sessionid

```
public static java.lang.String sessionid
```

Constructors

Client

```
public Client()
```

Package object

Class Summary

[Bill](#)

[History](#)

A simple class representing a buy history of a user.

[Product](#)

Represents a line in the Product table of the database

[User](#)

A simple User class, representing a line in the User Table of the database

object

Class Bill

```
java.lang.Object
|
+--object.Bill
```

< [Constructors](#) > < [Methods](#) >

```
public class Bill
extends java.lang.Object
```

Author:

Chris Simple class representing a bill in the database

Constructors

Bill

```
public Bill(int id,
            java.lang.String date,
            java.lang.String user,
            double amount)
```

Creates a bill with given values

Parameters:

- id - the bill id
- date - the date of creation
- user - the users mail
- amount - the amount to pay

Bill

```
public Bill(int id,  
            java.lang.String date,  
            java.lang.String user,  
            double amount,  
            java.util.ArrayList history)
```

Creates a bill with given values

Parameters:

id - the bill id
date - the date of creation
user - the users mail
amount - the amount to pay

Methods

getAmount

```
public double getAmount()
```

Returns:

the Amount

getDate

```
public java.lang.String getDate()
```

Returns:

the Date

getHistory

```
public java.lang.String getHistory()
```

Returns:

the History in String representation

getID

```
public int getID()
```

Returns:

the ID

getUser

```
public java.lang.String getUser()
```

Returns:

the User

object

Class History

```
java.lang.Object  
|  
+--object.History
```

< [Constructors](#) > < [Methods](#) >

```
public class History  
extends java.lang.Object
```

A simple class representing a buy history of a user.

Author:

Chris

Constructors

History

```
public History(java.lang.String date,  
               double price,  
               java.lang.String name,  
               int user,  
               boolean payed)
```

Methods

getDate

```
public java.lang.String getDate()
```

Returns:

the Date

getName

```
public java.lang.String getName()
```

Returns:

The booked products Name

getPrice

```
public double getPrice()
```

Returns:

The booked Products Price

getUser

```
public int getUser()
```

Returns:

the User

isPayed

```
public java.lang.String isPayed()
```

Returns:

True if the product was already payed, false if not

object

Class Product

```
java.lang.Object
|
+--object.Product
```

< [Constructors](#) > < [Methods](#) >

```
public class Product
extends java.lang.Object
```

Represents a line in the Product table of the database

Author:

Chris

Constructors

Product

```
public Product(java.lang.String barcode,
                java.lang.String name,
                java.lang.String price)
```

Methods

getBarcode

```
public long getBarcode()
```

Returns:

the Barcode

getName

```
public java.lang.String getName()
```

Returns:

the Name

getPrice

```
public double getPrice()
```

Returns:

the Price

object

Class User

```
java.lang.Object
|
+--object.User
```

< [Constructors](#) > < [Methods](#) >

```
public class User
extends java.lang.Object
```

A simple User class, representing a line in the User Table of the database

Author:

Chris

Constructors

User

```
public User(java.lang.String mail,
            java.lang.String password)
```

Creates a user with the given values

Parameters:

mail - The users email address
password - The users password

User

```
public User(java.lang.String mail,  
            java.lang.String prename,  
            java.lang.String name,  
            double money)
```

Creates a user with all possible information

Parameters:

mail - The users Email-address
prename - The users Prename
name - The users name
money - The users current money to pay

User

```
public User(java.lang.String mail,  
            java.lang.String password,  
            java.lang.String prename,  
            java.lang.String name)
```

Creates a User with the given values, all other variables have default value.

Parameters:

mail - The users e-mail address
password - The users password
prename - The users prename
name - The users name

Methods

getID

```
public int getID()
```

Returns:

The users unique id

getMail

```
public java.lang.String getMail()
```

Returns:

the Mail

getMoney

```
public double getMoney()
```

Returns:

The current money to be paid

getName

```
public java.lang.String getName()
```

Returns:

The name of the user

getPassword

```
public java.lang.String getPassword()
```

Returns:

the Password

getPreName

```
public java.lang.String getPreName()
```

Returns:

The Prenom of the User

setID

```
public void setID(int id)
```

Sets the users unique ID

Parameters:

id - The users id

setMoney

```
public void setMoney(double price)
```

Sets the money the user has to pay

Parameters:

price - The new debt

Package searchstuff

Class Summary

[MyContentProvider](#)

Class which provides suggestions during the product search.

searchstuff

Class MyContentProvider

```
java.lang.Object
|
|--ContentProvider
|
|--searchstuff.MyContentProvider
```

All Implemented Interfaces:

[ResponseListener](#)

< [Constructors](#) > < [Methods](#) >

```
public class MyContentProvider
extends ContentProvider
implements ResponseListener
```

Class which provides suggestions during the product search.

Author:

Simon

Constructors

MyContentProvider

```
public MyContentProvider()
```

Methods

delete

```
public int delete(Uri uri,
                  java.lang.String selection,
                  java.lang.String[] selectionArgs)
```

getType

```
public java.lang.String getType(Uri uri)
```

insert

```
public Uri insert(Uri uri,  
                  ContentValues values)
```

onCreate

```
public boolean onCreate()
```

query

```
public Cursor query(Uri uri,  
                   java.lang.String[] projection,  
                   java.lang.String selection,  
                   java.lang.String[] selectionArgs,  
                   java.lang.String sortOrder)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                              OnClickListener dialogClickListener)
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                              int a)
```

update

```
public int update(Uri uri,  
                  ContentValues values,  
                  java.lang.String selection,  
                  java.lang.String[] selectionArgs)
```

Package thread

Interface Summary

[ResponseListener](#)

Interface ResponseListener.

Class Summary

[NetworkThread](#)

New Thread that works parallel to the main thread

thread

Class NetworkThread

```
java.lang.Object
|
+--thread.NetworkThread
```

All Implemented Interfaces:

java.lang.Runnable

< [Constructors](#) > < [Methods](#) >

```
public class NetworkThread
extends java.lang.Object
implements java.lang.Runnable
```

New Thread that works parallel to the main thread

Author:

Schonhart

Constructors

NetworkThread

```
public NetworkThread(java.lang.String url,  
                     java.lang.String[][] param,  
                     ResponseListener listener,  
                     int a)
```

New Thread that works parallel to the main thread. The response from the server will be handed over to the methods of the ResponseListener interface. So all classes, which use NetworkThread, have to implement this interface to gain the response String from the server.

Parameters:

- url - The url for connecting to the server
- param - The parameters
- listener - The class that calls NetworkThread (This class implemented the interface ResponseListener)
- a - Variable for distinguishing between different conditions

NetworkThread

```
public NetworkThread(java.lang.String url,  
                     java.lang.String[][] param,  
                     ResponseListener listener,  
                     int a,  
                     DialogInterface.OnClickListener dialogClickListener)
```

New Thread that works parallel to the main thread. The response from the server will be handed over to the methods of the ResponseListener interface. So all classes, which use NetworkThread, have to implement this interface to gain the response String from the server.

Parameters:

- url - The url for connecting to the server
- param - The parameters
- listener - The class that calls NetworkThread (This class implemented the interface ResponseListener)
- a - Variable for distinguishing between different conditions
- dialogClickListener - Listener for opening a dialog

Methods

run

```
public void run()
```

thread

Interface ResponseListener

< [Methods](#) >

public interface **ResponseListener**

Interface ResponseListener. It is used in combination with the NetworkThread class.

Author:

Simon

Methods

getContext

```
public Context getContext()
```

responseReceived

```
public void responseReceived(java.lang.String message,  
                             DialogInterface.OnClickListener  
dialogClickListener)
```

This method handles the message received after class NetworkThread has finished its work A String and a DialogInterface has to be delivered to NetworkThread constructor.

Parameters:

list - List of Products

responseReceived

```
public void responseReceived(java.lang.String message,  
                             int a)
```

This method handles the message received after NetworkThread has finished its work.

Parameters:

message - Message from NetworkThread
a - Parameter to handle different conditions

Package util

Class Summary

[UrlManager](#)

Class to handle the used URLs

[Util](#)

Simple Util class to convert Strings to Lists and vice versa.

util

Class UrlManager

```
java.lang.Object
|
+--util.UrlManager
```

< [Fields](#) > < [Constructors](#) >

```
public class UrlManager
extends java.lang.Object
```

Class to handle the used URLs

Author:

Schonhart

Fields

baseUrl

```
public static java.lang.String baseUrl
    The url of the server application
```

certificateUrl

```
public static java.lang.String certificateUrl
    The url of the ssl certificate
```

Constructors

UrlManager

```
public UrlManager()
```

util

Class Util

```
java.lang.Object  
|  
+--util.Util
```

< [Constructors](#) > < [Methods](#) >

```
public class Util  
extends java.lang.Object
```

Simple Util class to convert Strings to Lists and vice versa.

Author:

Chris

Constructors

Util

```
public Util()
```

Methods

ATSBill

```
public static java.lang.String ATSBill(java.util.ArrayList list)
```

ATSHistory

```
public static java.lang.String ATSHistory(java.util.ArrayList list)
```

Converts a list of histories to a String which represents the History list as a list of Strings.

Parameters:

list - The History list

Returns:

The String

ATSProduct

```
public static java.lang.String ATSProduct(java.util.ArrayList list)
```

Converts a list of products to a String which represents the Product list as a list of Strings.

Parameters:

list - The Product list

Returns:

The String

ATSUser

```
public static java.lang.String ATSUser(java.util.ArrayList list)
```

Converts a list of Users to a String which represents the User list as a list of Strings.

Parameters:

list - The User list

Returns:

The String

STABill

```
public static java.util.ArrayList STABill(java.lang.String s)
```

STAHistory

```
public static java.util.ArrayList STAHistory(java.lang.String s)
```

Converts a String which represents a List of Histories to a List of Histories.

Parameters:

s - The String

Returns:

The History List

STAProduct

```
public static java.util.ArrayList STAProduct(java.lang.String s)
```

Converts a String which represents a List of Products to a List of Products.

Parameters:

s - The String

Returns:

The Product List

STAUser

```
public static java.util.ArrayList STAUser(java.lang.String s)
```

Converts a String which represents a List of Users to a List of Users.

Parameters:

s - The String

Returns:

The User List

appendList

```
public static java.util.ArrayList appendList(java.util.ArrayList list1,  
                                              java.util.ArrayList list2)
```

Appends list1 with elements from list2 that are not in list1 Note: Changes list1 during process!

Parameters:

list1 - the first list

list2 - the second list

Returns:

the changed list1
